Dear Review Committee Member,

As a graduate in the field of Computer Systems: Game Development from California State University San Bernardino (CSUSB), I am seeking the Quality Assurance position at Square Enix, El Segundo, CA.

As a longtime fan of Square Enix products, especially the Final Fantasy games and the Tomb Raider games, I am excited to have the opportunity to apply for this position. The company's recent releases, *Star Ocean 5: Integrity and Faithlessness* and *Kingdom Hearts Unchained X* both show a remarkable standard in quality that I believe I can contribute to. As an amateur mobile game developer, I have skills in bug finding and debugging. My latest title was a Role-Playing Game that had many bugs during its development due to its complexity. I fixed many of them by myself, analyzing thousands of lines of code to find a simple error...or a large error that required the entire function or class to be rewritten. My problem-solving skills has greatly improved as a result, and I plan to put that knowledge to good use in the workplace.

As you note in my résumé, I have a great amount of experience in Microsoft Office and written communication. My previous work as a Teacher's Assistant has taught me to stay proactive in my work by making lectures before deadline, and keeping gradebooks updated constantly, as an error report database should be as well. I am sure that background would be useful for being a QA Tester.

I believe my experiences could be a great asset to Square Enix in upholding the quality of games the company releases. I welcome the opportunity to meet with you to discuss this my qualification further. Please contact me at (760) 288-1564, or by email at kristianhowardjr@gmail.com. Thank you for your time and consideration!

Sincerely,

Kristian Howard Jr
